

AN EFFECTIVE TOOL FOR FARMERS

CUSTOMER

Freddy Blot - poultry farmer, turkey breeder, in Deux-Sèvres.

CHALLENGES

The farm worker was in need of a vehicle which would allow him to move around easily on any type of terrain while working.

SOLUTION

Thanks to its low pressure wide tires which give excellent stability and a better work comfort on any type of terrain, the Segway x2 SE is perfectly adapted to the agricultural trade. The Segway x2 SE was designed to work on slippery terrain (grass, gravel, sand) or uneven terrain, which means it can be used everywhere in nature and this without impacting the environment. Technologically revolutionary, it emits no CO2 and creates no noise pollution in its path. The Segway PT is a perfect combination of reliability, practicality and manoeuvrability.

Mr Blot, is a big fan of the Segway PT, using it for his preparation and monitoring phases of his buildings on his two operating sites. With plots of 4,839 m² to 6,600 m² spread over two sites and buildings from 50 to 120 meters in length, buying an all-terrain Segway.

The Segway PT was a necessity for him and he is completely satisfied: "I bought my first Segway in 2011 and in 5 and a half years, I travelled more than 16,000 kilometres, which is more than 3,000 kilometres in a year! It served me during the building preparation phases as well as for moving around on my farm in order to tour the farms. I wouldn't trade it in for the world; I wouldn't go back to something else!"
